## Other door hardware you may need.

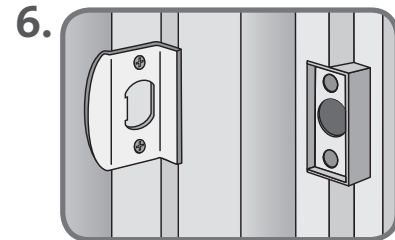

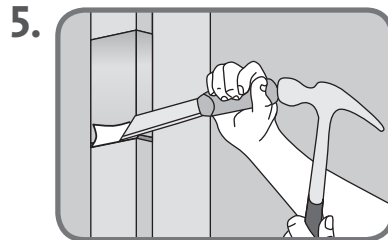

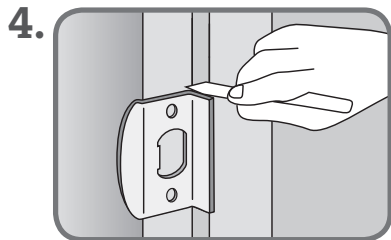

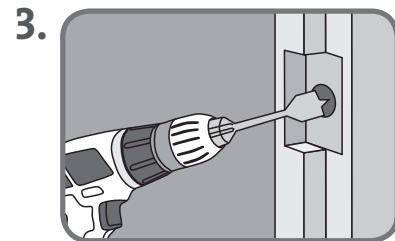

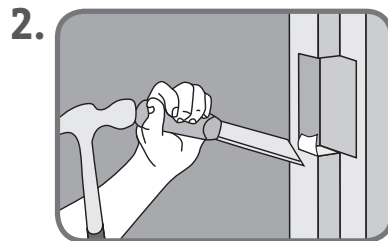

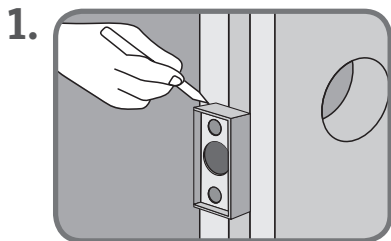

After purchasing **Trio Revive**® levers, be sure to complete the project with quality products from the **Trio Revive**® range.

## Rebate Kit Installation

When installing locks or levers to a double door (french doors) there is usually a need to attach rebate kits to the doors. The purpose of the kit is to protect the latching cavity of the second door (the one that won't be used as often).

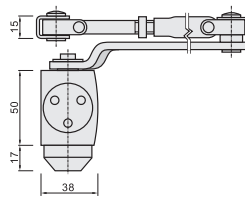

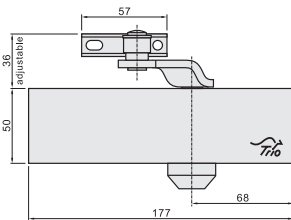

1. Position rebate block on door edge, ensure it is aligned with lock position, then mark out block perimeter with pencil.
2. Chisel out the timber for the rebate block, making sure it's flush with the edge.
3. Drill a 25 mm (1 inch) hole checking alignment with rebate block. Insert deadbolt through hole and fasten rebate block on to door with screws.
4. Place the strike plate on the door jamb. Checking alignment with installed deadbolt, mark around strike plate.
5. Chisel out timber to fit strike plate.
6. Position strike plate on door frame, then mark and drill in screw holes. Fix strike plate to frame and check that door closes and deadbolt functions correctly.
