

# spring hinge

double action | 76 mm

These hinges have an in-built spring which forces the door or gate to return to the original position after opening.

Spring hinges are available in single or double action, with the double action type being suitable where a 180 degree opening action is required, for example bar doors, restaurant kitchen doors etc.

## fitting instructions

1. Position the hinge on the door.
2. Fix the hinges to the door. If using a manual screwdriver it may be helpful to first drill screw pilot holes using a drill bit of half the diameter of the screw thread.
3. Position door within the frame and fix hinges to the frame.
